KILL TICKS

Where Sprays Can't Reach

THERMACELL
TICK CONTROL TUBES

KILL TICKS WITH LYME WHERE SPRAYS CAN'T REACH

Thermacell Tick Control Tubes deliver a targeted tick killer without harming kids, pets or the environment.

Thermacell Tubes contain a permethrin treated cotton that kills immature deer ticks when they feed on mice, their primary host.

Deer Ticks and Lyme Disease – A Growing Problem

US tickborne diseases increased more than 100% from 2004 to 2016 with Lyme disease accounting for over 82% of these cases¹. In some parts of the country 40-60 percent of collected ticks are infected with Lyme².

Mice Are the Problem

Mice are the primary source of Lyme disease infected ticks on a property. And these infected ticks pass Lyme on to people and pets.

Sprays Don't Reach Mice...

Mice are nocturnal, foraging for food by night. When a yard is sprayed, mice are asleep in their nests underground, inside sheds or other places sprays don't reach.

But Thermacell Tick Control Tubes Can

1. Thermacell Tick Control Tubes contain cotton treated with permethrin insecticide.
2. Mice collect the treated cotton and use it to line their nests, rubbing the insecticide into their fur.
3. Ticks feeding on the mice die.

Tick Control Tubes Help Treat the Entire Yard

Sprays can treat the yard perimeter, but tick tubes treat mice throughout the property improving protection for the entire yard.

- 5 foot perimeter protected by sprays
- Tick Control Tubes treat the entire area

Ticks Don't Feed on Treated Mice and Die

In lab tests conducted by Dr. Thomas Mather at the University of Rhode Island TickEncounter Resource Center, mice were exposed to untreated and permethrin-treated cotton. The mice were then exposed to 100 larval and 12 nymphal blacklegged ticks. Results show that while ticks fed on untreated mice, no ticks successfully fed on the treated mice, and virtually all the ticks exposed to treated mice died in under 2 hours.

Tick Control Tubes Eliminated Ticks Feeding On Mice

Available in the Continental US

Works best in New England, the Mid Atlantic and Northern Woods where **96%** of Lyme disease cases are concentrated and deer tick populations are high.

Data based on top 15 states with cases of Lyme disease, 5 year average, 2011-2016.
